We Support You.

*When it comes to EHR implementation,*  
**SOMETIMES TWO HEADS  
ARE BETTER THAN ONE.**

**Most people don't pedal down the path of EHR implementation every day.** Planning for Electronic Health Record (EHR) system success takes time, commitment and experience. Getting advice from someone who's been down that trail before may not be such a bad idea. That's where we can help.

Maxwell IT can help guide your practice through implementation. Whether you're a solo practitioner or a large multi-specialty practice, our team of experienced professionals can help you realize immediate results from your investment.

In addition to the basic implementation service EHR vendors provide, practices are also required to assign an internal project manager – someone to help oversee and complete the process. We take up where the vendor leaves off, helping you manage the project from the practice point of view.

- **We are the recognized leader in EHR implementation for ambulatory practices nationwide.**

Maxwell IT maintains high standards in EHR certification and training for its team.

- **We lend insight into the areas of resource planning,**

scope of work planning, lab interfaces, and clinical configuration of the system.

- **We work on behalf of you the practice,**

not the vendor to keep your project on track, on time, and on budget.

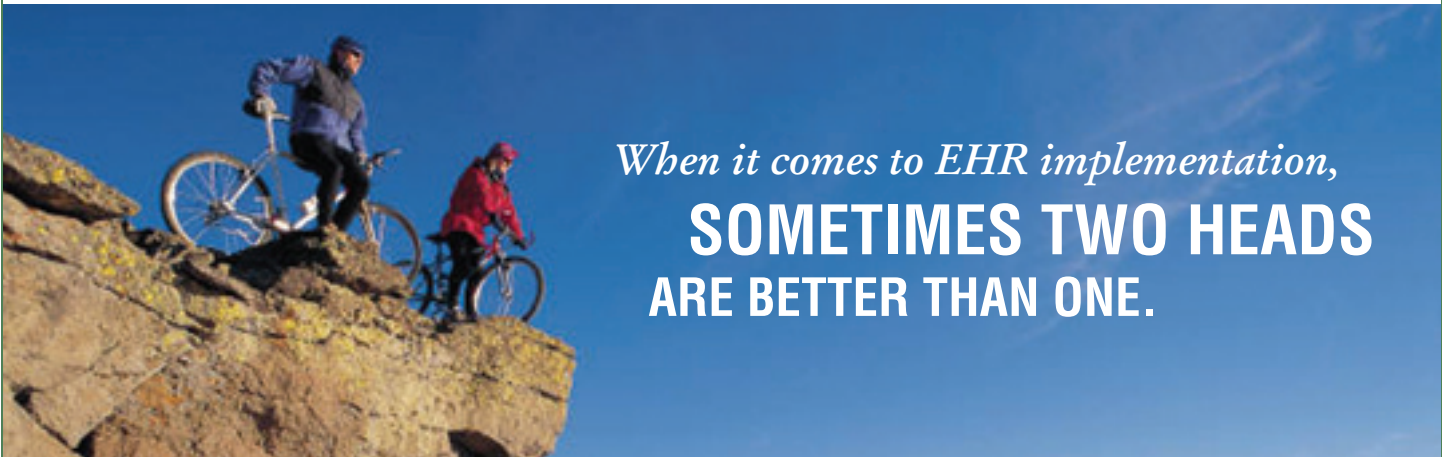

*"Maxwell IT has been instrumental at every step of the way with respect to my electronic medical record system. From figuring out what my needs are to implementing the system, I have felt confident that my IT consultants are behind me 100% of the time."*

*Stacey Donlan, MD,  
Eastside Premiere Medicine*

Let us help you navigate the sometimes challenging path of healthcare technology. Because sometimes two heads are better than one.

ARE BETTER THAN ONE.**

## **Bumps on the road of implementation**

Despite the savings EHR's provide, there can be bumps in the road too. Most practices assume when purchasing their license fees, hardware and training, they're covered.

*Enter bump number one.*

EHR's streamline practice workflow. Streamlining workflow means additional work beyond what comes with the basic installation service provided. Many practices are not aware of the extra configuration work required by their clinicians.

*Enter bump number two.*

When transitioning to "go-live" on a system, maintaining your patient load, monitoring technology milestones, and managing vendor resources can be a hurdle by itself.

*Enter bump number three.*

## **Maxwell IT: a proven path to success**

Practice's benefit significantly when a short-term project manager with healthcare technology skills to oversee the implementation.

We save you time and money (and stress) by leveraging our experience and know-how. Our project managers will build a comprehensive implementation budget and project plan to minimize your time and maximize your results.

We've been in your shoes before and can plan for the unexpected. Maxwell IT can identify the bumps in the road, and can steer around them accordingly.

## **Call Us Today for a Free Consultation**

Let us help you get started with a free implementation planning assessment. We can help identify what areas will milestones, budget items and resources need to be addressed, before your begin. We are the leading experts for ambulatory EHR implementation. Contact us today (206) 284-3677, [www.maxwellit.com](http://www.maxwellit.com).
